

112. The peritoneal dialysis catheter of claim 110, wherein the catheter is so constructed and arranged that fluid can flow simultaneously in opposite directions through the first and second lumens.

113. The peritoneal dialysis catheter of claim 110, wherein the catheter further comprises a single tube having the first and second lumens.

114. The peritoneal dialysis catheter of claim 110, wherein the first and second lumens have different lengths.

115. The peritoneal dialysis catheter of claim 110, wherein the catheter is so positioned and arranged when in use in a peritoneal cavity that fluid flows across a substantial portion of the peritoneal cavity from the first lumen to the second lumen.

REMARKS

This is a preliminary amendment submitted prior to substantive examination of the patent application which adds newly submitted claims 38 - 115. Applicants submit that all of the new claims are supported by the specification as originally filed and no new matter has been added. Applicants also note that these claims are not being added in response to any rejections or for

4
CND
purposes of narrowing the claimed subject matter. Therefore, Applicants do not intend to
disclaim any subject matter in view of the Amendment.

Respectfully submitted,

BELL, BOYD & LLOYD LLC
